

APPROVED SOIL AMENDMENTS

New lawns require special attention to thrive in our semi-arid climate. To promote your goal of a beautiful landscape while watering wisely, we recommend these approved soil amendments. They help your lawn retain water and promote healthy growth. Soil amendments should mix into the top 6" of the soil to save 25% of the required moisture.

Please **provide a receipt** of the approved amendment purchased showing **4 cubic yards per 1,000 square feet** with your establishment permit application.

For an exception to the soil amendment requirement or for special consideration of an unlisted soil amendment, please submit the soil test results provided by a [professional soil laboratory](#).
